Covid-19 Update

ENTEC CONTINUES TO BE FULLY OPERATIONAL – DELIVERY OF PPE EQUIPMENT AVAILABLE

We are pleased to confirm that Entec International has remained fully operational throughout the COVID-19 crisis. We continue to provide and extend our global MRO services and are supporting clients in successfully sourcing PPE worldwide - including in challenging regions such as Africa.

With a second spike in prospect, **please contact us if you have requirement for PPE going forward.**

We will continue to adhere to government guidelines and operate under COVID secure conditions. Some staff are working from home, while others are in the office/warehouse observing appropriate social distancing. However, wherever they are based, all members of the Entec team are working normal hours and are available on the usual contact numbers.

Entec has grown its business over recent months and has rolled out services in new regions. Accordingly, we will be expanding our operations to meet additional demand and will shortly be announcing new shift patterns and extended working hours, as well as introducing more people to the team as we implement new business contracts.

In the meantime, we thank you for your business. We will continue to manage your supply chains with our usual efficiency and provide the support you need as we all negotiate the new 'normal'.

For any further information about our COVID policy, please don't hesitate to contact us.
